

SECURE-IDLE™

**Completely Hidden Anti-Theft System
for all types of vehicles**

**Keeps your engine running—without
a key in the ignition!**

**Excellent for law enforcement
and delivery vehicles**

Simple push-button operation

Starter override protection

Quick & easy installation

**Total vehicle operation
is maintained**

**3-year total replacement
warranty**

SIMPLE OPERATION

KEY-OUT

Put the vehicle in "Park", push the button on the dashboard activating the **Secure-Idle** system. Turn the ignition off and remove the key. **Secure-Idle's** memory sensing function allows the vehicle's engine to keep running. What makes **Secure-Idle** better than competitors' ignition override switches is that the engine and all accessories (emergency lighting, radios, heaters, air conditioners, defrosters, etc.) remain fully functional after the keys have been removed. **Secure-Idle** is completely compatible with 4-way flashers.

KEY-IN

To deactivate the **Secure-Idle** system, just reinsert the key and turn the ignition to the "on" position.

STARTER OVERRIDE PROTECTION

Don't worry if you try to start your vehicle again while deactivating the system. **Secure-Idle** is equipped with a starter bypass that automatically prevents accidental starter engagement.

IDEAL FOR ANY TYPE VEHICLE ...

- Police cars, ambulances, fire engines and other emergency vehicles are often left running at the site of emergencies to both ensure they are ready to be driven away and to power auxiliary equipment which must continue to run. **Secure-Idle** is 100% reliable, convenient and inexpensive.

- Trucks are routinely left running during cold weather because of difficulty in restarting the engines.

- Delivery vehicles or personal vehicles can also benefit from **Secure-Idle**. It eliminates frequent engine restarting which saves wear and tear on the battery and your starter as well as conserves gasoline.

Other types of vehicles that can utilize a **Secure-Idle System**:

City, state, and federal service vehicles
Utility trucks and construction vehicles
School buses
Limousines
Tow trucks
Lawn care and other service vehicles
Personal vehicles—cars, trucks, vans and minivans

ANTI-THEFT PROTECTION

Secure-Idle is the ultimate anti-theft device. Not only is the unit completely hidden from view, it only takes one second to activate. If an intruder tries to touch the brake pedal or shift the lever out of the "park" position, the vehicle's electrical system is automatically shut off.

Hookup sounds (horn or siren) are available (by special order only*) that will activate when the **Secure-Idle** system is "tripped." Any attempt to hot-wire a vehicle by breaking the steering column also disengages the **Secure-Idle** system and sounds the alarm. **Secure-Idle** cannot be used by an unauthorized person to activate the system when the vehicle is not in use.

**Allow up to 60 days for delivery on special order units.*

CUSTOM BUILT ...

Just specify the year, make and model of your vehicle and a professionally trained **Secure-Idle** technician will design a system to your vehicle's configurations. Because of **Secure-Idle's** unique design and application, professional installation is required to guarantee proper unit performance and customer satisfaction.

SPECIFICATIONS

- Made in the U.S.A.
- Solid-state technology.
- Water-resistant.
- 60-amp load capabilities.
- Color-coded wires for ease of installation.
- Easily adapted to your control panel.
- Manufactured of high quality materials that are totally encased and insulated.

Small, concealable push-button will be located on your dashboard.

QUICK & EASY INSTALLATION

Because downtime on vehicles is so critical, **Secure-Idle** technicians can install a unit in less than one hour, some units even in under 30 minutes. The **Secure-Idle** unit is tied into the vehicle's existing power source supplied by the original manufacturer.

Secure-Idle can provide certificates documenting the installation of units in your vehicle fleet for insurance purposes. A window warning sticker is also provided, informing intruders that the vehicle is secured with a **Secure-Idle** system.

WARRANTY

Secure-Idle backs the quality of their product with an exclusive **3-year warranty** (when installed on original vehicles only) covering product replacement at no extra charge. The installation of a **Secure-Idle** unit does not void any existing vehicle manufacturer's warranties.

PROVEN RELIABILITY

More than 3 years of extensive vehicle testing have already been performed on **Secure-Idle** systems. The demand for an anti-theft device of this kind for all types of vehicle equipment was the reason **Secure-Idle** was developed.

In comparison to the potential risks and costs in insurance, liability, wasted time and manpower, **Secure-Idle** is a valuable investment.

PROTECTS LIABILITY

There are reports of increasing thefts of law enforcement, emergency and other service vehicles. In most cases, the keys were left in the ignition with doors unlocked while emergency personnel were busy performing their duties. Paramedics report equipment, medications and medical items stolen from unlocked ambulances.

Secure-Idle is a fail-safe method of guarding your vehicles from damage or theft. It also protects the lives or personal property of those in which you are responsible while on call by maintaining complete control of all your interior vehicle equipment while the system is engaged.

SECURE-IDLE will never leave you stranded!

It is 100% reliable. You save wear and tear on your engine because of battery drainage and eliminate damage to your starter due to frequent restarting. Duplicate sets of keys are not necessary. You won't lock yourself out of your vehicle or call for a tow for a dead battery.

Your local **Secure-Idle** representative is available for a complete demonstration of the system.

Let us show you how **Secure-Idle** can be effective protection for your vehicles and personnel ... quickly and economically.
