*The power of CopTrax
in-car video in a body
worn solution*

Protect your officers, their integrity, and your department

*Manage evidence
with the power of your
mobile device*

*Available for Android, iOS,
and Windows phone*

Record events where they happen View events when they happen

Everybody records events as they happen. CopTrax makes real-time, streaming video and audio available to any Internet-connected computer with CopTrax credentials.

Video Uploads Automatically

Evidence files upload automatically to the Cloud or department servers without the need to physically park at a building access point.

Lowest Cost of Ownership

CopTrax's lean footprint and minimal hardware keeps the cost of ownership the lowest in its class.

Video Files are Safe and Secure

Evidence files can be stored on Microsoft's Azure Government platform, the benchmark in data security.

Microsoft Azure Government

Preset Triggers Launch Video

The system fully integrates into the patrol vehicle. Up to 8 triggers such as lightbar, siren, speed, and braking initiate recording so your officers can focus on the task at hand.

1280 x 720 HD Video

Evidence files can be recorded in high-definition (1280x720) or standard definition (640x480).

Powerful On-Board Computer

CopTrax's on-board computer is optimized for the demands of video processing.

Space-Saving External Monitor

The optional touchscreen external monitor saves even more space, yet allows full control of the CopTrax system without the use of a vehicle laptop.

On-Board Backup Battery

We all know what that's for. And you'll be glad you have it when you need it.

24-Hour Background Recording

No Lost Video Evidence.

Redundant background recording ensures that no video evidence is lost by activating automatically when the vehicle's ignition is turned on. Our dual-drive architecture ensures that when the main CopTrax video system records an event, both the event video and the background video are saved.

On-Board Impact Sensor

An on-board impact sensor activates the system in case your officer can't.

Automatic Patrol-Area Monitoring

CopTrax makes geo-fencing and perimeter monitoring automatic.

Capture

Capture and live stream HD video with the CopTrax app on your smartphone or tablet.

Upload

Upload to the Cloud directly from your smart device, automatically.

Document

Document and annotate evidence files for easy searching and recall.

View

View evidence files in HD like you would on your desktop or tablet.

Track

Track activity in your jurisdiction, on your beat, or any defined area in real time.

Actual size

Keep It Simple: Single start/stop button and high-definition video

A single start/stop button and high-definition video evidence keep the Stalker CopTrax Body Worn Camera simple to operate. Plus, its other features: IR LEDs, still-photo mode, and audio-only, are available when you need them. Best of all, this camera can be implemented as a stand-alone system, or as a component of the CopTrax In-Car Video System.

- One-button record start/stop
- Automatically uploads video evidence via docking station
- Up to 7 hours of continuous use
- 123° field of view
- Records up to full HD 1080p
- IP66 dust proof and water proof
- 32Gb of upgradeable storage
- Powerful device manager software
